EU Blue Card valid until 12/2027

PROFESSIONAL SUMMARY

QA Automation Engineer with 7+ years of experience across UI and API automation, CI/CD-integrated quality, framework improvement, and environment-aware testing. Strong background in building practical automation solutions, improving test coverage, and helping teams move from repetitive manual work toward more scalable and maintainable quality processes.

Experienced with Playwright, Selenium, Postman/Newman, C#, TypeScript/JavaScript, PowerShell, and supporting Python usage. Particularly effective in roles where automation needs to be introduced or expanded pragmatically, with attention to reliability, maintainability, and team adoption.

Best matched to projects where quality engineering is growing from manual-heavy processes into stronger automation, framework structure, and repeatable validation workflows.

CORE STRENGTHS

Building and improving test automation frameworks

Expanding automation in environments with strong manual testing legacy

UI and API automation

Playwright, Selenium, Postman/Newman

TypeScript / JavaScript practical usage

Strong QA fundamentals and structured testing mindset

CI/CD-integrated quality and feedback loops

Practical coding for automation, tooling, and helper utilities

Strong debugging and problem-solving approach

Process optimization and repetitive task reduction

TECHNICAL SKILLS

Automation & Testing: UI automation: Playwright, Selenium, FlaUI, Power Automate, API testing: Postman, Newman, REST API validation, Test design: regression, smoke, system-level validation, workflow testing, Test management: TestRail, Supporting Python exposure in automation-related contexts, Solid understanding of QA methodologies, Agile, and Scrum

Languages: C# — strong working automation language, PowerShell — strong practical automation and tooling language, TypeScript / JavaScript — practical test automation and scripting usage, Python — supporting / practical exposure, Java — foundational / earlier professional use

CI/CD & Delivery: Azure DevOps, TeamCity, Jenkins, YAML pipelines, Release automation, Automation integrated into delivery workflows

Infrastructure / Supporting Tools: Azure, Bicep, Windows / Linux, Bash, Docker / Kubernetes (practical usage), Monitoring / logs / workbooks, Browser DevTools, Wireshark, Fiddler

PROFESSIONAL EXPERIENCE

DEFINELY — QA AUTOMATION ENGINEER

Kraków, Poland
06/2025 – 03/2026

Worked in a complex product environment with strong focus on improving existing automation, increasing coverage, and supporting the team through changing automation approaches.

Key Contributions

- Improved and extended an existing **API automation framework** to better support team needs
- Increased automated coverage from **117 to 199 tests** without increasing total runtime
- Reduced log volume from around **1.5 GB to 11 MB** per run by removing unnecessary debug logging
- Improved signal quality and made test output much more actionable for analysis and failure triage
- Helped shape a **hybrid automation model** where no-code orchestration was supported by PowerShell and Python when needed
- Supported transition toward **Playwright + TypeScript** as a more maintainable and scalable automation direction
- Worked in a business-driven environment where automation had to be practical, team-friendly, and sustainable
- Helped enable wider team participation in automation instead of keeping it isolated within one engineer role

Relevance to This Role

- Strong match for **building and expanding automation in a previously more manual setup**
 - Relevant experience in **framework improvement, coverage growth, and maintainability**
 - Strong overlap with projects where automation needs to be introduced pragmatically rather than ideologically
 - Relevant modern stack exposure through **Playwright + TypeScript**
-

LEAPWORK — TESTER / DEVOPS ENGINEER

Kraków, Poland / Minsk, Belarus
11/2018 – 03/2025

Worked across QA automation, scripting, internal tooling, environment automation, infrastructure support, and release processes within the same product ecosystem.

Key Contributions

- Built and maintained **PowerShell scripts**, JavaScript/Tampermonkey automations, helper tools, VM utilities, installation automation, and workflow improvements
- Automated repetitive manual processes and reduced operational friction across internal team workflows
- Designed and supported environment automation and related internal tooling
- Worked with Azure, pipelines, release support, virtual machines, monitoring, logs, and broader delivery-related automation
- Built silent installation flows, remote installation tooling, and browser-side helpers for repetitive work
- Worked in a product environment where improving engineering workflow mattered as much as isolated test execution
- Helped teammates with setup, onboarding, troubleshooting, and knowledge sharing

Relevance to This Role

- Strong fit for introducing automation into real team workflows
 - Strong practical engineering mindset around reliability and maintainability
 - Useful background for teams that need not only tests, but also better automation habits and tooling support
-

EPAM SYSTEMS — AUTOMATION QA ENGINEER / TESTER (.NET)

Minsk, Belarus

09/2017 – 11/2018

Early enterprise automation stage that built strong coding and testing foundations.

Key Contributions

- Worked with **Java**, **C#**, **Selenium WebDriver**, and **NUnit**
- Contributed to regression automation in structured enterprise environments
- Built foundational experience in code-based automation and maintainable test work
- Had some exposure to mobile automation through Xamarin-related work

Relevance to This Role

- Solid base in automation engineering
 - Good long-term QA foundation
 - Strong starting point for later framework and tooling work
-

EDUCATION

Belarusian State University of Informatics and Radioelectronics (BSUIR)

Bachelor of Science in Digital Economy

Minsk, Belarus

2013 – 2017
