

Yauheni Sheima

SENIOR QA AUTOMATION ENGINEER / SDET - TEST PLATFORM AND DEVELOPER PRODUCTIVITY

Krakow, Poland

Phone: +48 572 230 851

Email: yauhenisheima@gmail.com

LinkedIn: <https://www.linkedin.com/in/yauhei-sheima/>

EU Blue Card valid until 12/2027

PROFESSIONAL SUMMARY

Senior QA Automation Engineer / SDET with 7+ years of experience across UI/API automation, CI/CD-integrated quality, framework improvement, test environment automation, diagnostics, and internal tooling.

For **Affirm - Senior Software Engineer, Backend (Test Enablers)**, the relevant focus is scalable validation infrastructure: reliable CI signal, test data setup, deterministic workflows, targeted integration and E2E checks, failure diagnostics, and practical developer productivity. My strongest fit is not pure backend platform ownership from scratch, but automation-heavy engineering that reduces manual test operations, improves release feedback, and makes test systems easier for teams to use and trust.

CORE STRENGTHS

- Test automation strategy and framework improvement
- CI/CD-integrated validation and release quality gates
- API automation, backend validation, and data-driven test setup
- Test environment reproducibility and diagnostic tooling
- Log analysis, failure triage, and signal-to-noise improvement
- Cross-functional collaboration with QA, developers, and product teams
- Async-friendly documentation, setup guidance, and knowledge sharing
- Practical automation with PowerShell, TypeScript, C#, SQL, and Python scripting
- AI-assisted engineering workflows with Claude Code, ChatGPT, and Copilot
- Pragmatic ownership of ambiguous quality and delivery problems

TECHNICAL SKILLS

Role-relevant stack: Test automation platforms, CI/CD, API validation, deterministic test workflows, load/support tooling

Automation: Playwright, Selenium WebDriver, API automation, Postman/Newman, Power Automate, FlaUI, TestRail

Languages: TypeScript/JavaScript, C#, PowerShell, Java, SQL, practical Python scripting

CI/CD: Azure DevOps, Jenkins, TeamCity, GitHub Actions/GitLab CI context, YAML pipelines, Git

Diagnostics: Logs, SQL, browser DevTools, defect triage, environment investigation, release support

Infrastructure context: Azure, Bicep, Docker/Kubernetes support scenarios, Windows/Linux, Grafana/K9s/Helm

PROFESSIONAL EXPERIENCE

Definely - QA Automation Engineer

Krakow, Poland

06/2025 - Present

- Refactored and extended an API automation framework, raising coverage from around 117 to 199 tests without adding runtime.

- Cut automation log output from around 1.5 GB to 11 MB per run, improving failure analysis and reducing diagnostic noise.
- Used API-driven setup and backend validation to shorten scenario validation from 5+ minutes to about 1 minute.
- Supported the move toward Playwright and TypeScript as the maintainable direction for modern UI automation.
- Worked with PostgreSQL and backend context to validate data, reproduce defects, and improve scenario reliability.
- Helped QA and developers connect acceptance criteria, automation coverage, defect evidence, and release readiness.
- Used AI-assisted tools including Claude Code, ChatGPT, and Copilot to accelerate test design, debugging, and repetitive engineering work.

Leapwork - QA Automation Engineer (DevOps & Automation Focus)

Krakow, Poland / Minsk, Belarus

11/2018 - 03/2025

- Automated reproducible test and release-support environments with PowerShell, Azure DevOps YAML, Bicep, and VM tooling.
- Built scripts, browser helpers, installation utilities, and internal tools to remove repetitive manual work from QA/support workflows.
- Supported CI/CD pipelines, release diagnostics, environment setup, logs, monitoring, and infrastructure-aware quality work.
- Worked with Docker/Kubernetes support scenarios, Grafana/K9s/Helm, services, logs, and deployment troubleshooting.
- Improved team workflows by documenting setup paths, helping with onboarding, and making environment operations easier to repeat.
- Connected QA outcomes with delivery needs: faster feedback, cleaner diagnostics, more reproducible environments, and lower manual support load.

EPAM Systems - Automation QA Engineer / Tester (.NET)

Minsk, Belarus

09/2017 - 11/2018

- Built enterprise automation foundations with Java, C#, Selenium WebDriver, and NUnit.
- Maintained and extended UI regression automation for enterprise web applications.
- Executed and monitored automated test runs in Jenkins and analyzed regression failures.
- Contributed to framework and documentation practices for maintainable automated testing.

ROLE-RELEVANT POSITIONING

- Best fit: SDET, QA automation, test infrastructure, platform quality, developer productivity, CI/CD-aware validation, and API/UI automation roles.
- Strongest practical areas: automation design, framework improvement, CI signal quality, diagnostics, environment reproducibility, and delivery-focused quality engineering.
- Honest scope: strongest recent work is QA/SDET and infrastructure-aware automation; backend platform engineering, contract testing, and load testing are adjacent growth areas rather than long-term primary ownership.

EDUCATION

Belarusian State University of Informatics and Radioelectronics (BSUIR)

Bachelor of Science in Digital Economy

Minsk, Belarus

2013 - 2017
