EU Blue Card valid until 12/2027

PROFESSIONAL SUMMARY

Senior QA Automation Engineer / SDET with 7+ years of experience across UI/API automation, CI/CD-integrated quality, framework improvement, defect triage, environment-aware testing, and practical automation tooling.

For **Cracken - Software Development Engineer in Test (SDET)**, the relevant focus is end-to-end quality ownership, smoke/regression/integration automation, CI/CD release quality gates, environment stability, failure diagnosis, and testing of AI-driven product behavior. I bring strong QA automation and DevOps-aware quality experience, with honest ramp-up needed in deep cybersecurity domain knowledge.

CORE STRENGTHS

- End-to-end QA ownership and automation strategy
- Smoke, regression, integration, and API automation
- CI/CD release quality gates and failure triage
- Test environment stability and reproducible validation
- Test scenarios, test cases, coverage gaps, and metrics
- Playwright/Selenium direction with TypeScript/JavaScript automation
- PowerShell, C#, SQL, and practical Python scripting for tooling and setup
- Cross-functional collaboration with engineering and product stakeholders
- Product-context learning and defect pattern recognition
- AI-assisted engineering workflows with Claude Code, ChatGPT, and Copilot

TECHNICAL SKILLS

Role-relevant stack: SDET, test frameworks, CI/CD, API/UI automation, AI-assisted workflows, environment diagnostics

Automation: Playwright, Selenium WebDriver, API automation, Postman/Newman, Power Automate, FlaUI, TestRail

Languages: TypeScript/JavaScript, C#, PowerShell, Java, SQL, practical Python scripting

CI/CD: Azure DevOps, Jenkins, TeamCity, GitHub Actions/GitLab CI context, YAML pipelines, Git

Testing: Smoke, regression, integration, E2E, acceptance criteria review, defect triage, release readiness

Infrastructure context: Azure, Bicep, Docker/Kubernetes support scenarios, Windows/Linux, Grafana/K9s/Helm, logs

PROFESSIONAL EXPERIENCE

Definely - QA Automation Engineer

Krakow, Poland
06/2025 - Present

- Refactored and extended an API automation framework, raising coverage from around 117 to 199 tests without adding runtime.

- Cut automation log output from around 1.5 GB to 11 MB per run, improving failure analysis and reducing diagnostic noise.
- Used API-driven setup and backend validation to shorten scenario validation from 5+ minutes to about 1 minute.
- Started in a C# and FlaUI automation framework, then moved with the product direction toward TypeScript and Playwright.
- Helped QA and developers connect acceptance criteria, automation coverage, defect evidence, and release readiness.
- Used PostgreSQL and backend context to validate data, reproduce defects, and improve scenario reliability.
- Used AI-assisted tools including Claude Code, ChatGPT, and Copilot to accelerate test design, debugging, and repetitive engineering work.

Leapwork - QA Automation Engineer (DevOps & Automation Focus)

Krakow, Poland / Minsk, Belarus

11/2018 - 03/2025

- Automated reproducible test and release-support environments with PowerShell, Azure DevOps YAML, Bicep, and VM tooling.
- Built scripts, browser helpers, installation utilities, and internal tools to remove repetitive manual work from QA/support workflows.
- Supported CI/CD pipelines, release diagnostics, environment setup, logs, monitoring, and infrastructure-aware quality work.
- Worked with Docker/Kubernetes support scenarios, Grafana/K9s/Helm, services, logs, and deployment troubleshooting.
- Helped teammates with onboarding, setup, documentation, and technical troubleshooting.
- Worked around enterprise application workflows including Dynamics 365 and banking-style green-screen scenarios.

EPAM Systems - Automation QA Engineer / Tester (.NET)

Minsk, Belarus

09/2017 - 11/2018

- Built enterprise automation foundations with Java, C#, Selenium WebDriver, and NUnit.
- Maintained and extended UI regression automation for enterprise web applications.
- Executed and monitored automated test runs in Jenkins and analyzed regression failures.
- Contributed to framework and documentation practices for maintainable automated testing.

ROLE-RELEVANT POSITIONING

- Best fit: SDET, QA Automation Engineer, AI-product QA, CI/CD-aware QA, API/UI automation, and release quality roles.
- Strongest practical areas: automation design, framework improvement, failure diagnostics, environment stability, release feedback, and product-context QA ownership.
- Honest scope: cybersecurity, offensive security, red-team concepts, and deep AI-agent testing are growth areas; current strength is automation, diagnostics, CI/CD, and quality ownership.

EDUCATION

Belarusian State University of Informatics and Radioelectronics (BSUIR)

Bachelor of Science in Digital Economy

Minsk, Belarus

2013 - 2017
