EU Blue Card valid until 12/2027

IDENTITY / POSITIONING

QA Automation Engineer / SDET focused on Python-supported automation, CI/CD-integrated quality, Linux/Windows environment validation, system-level testing, and practical framework improvement.

SHORT RECRUITER SUMMARY

QA Automation Engineer with 7+ years of experience across API/UI/system-level automation, CI/CD, test framework improvement, scripting, and environment-aware validation. Strong practical background in Python-supported automation, PowerShell, C#, TypeScript/JavaScript, REST API testing, SQL/PostgreSQL, Jenkins, TeamCity, Azure DevOps, Docker/Kubernetes support scenarios, Linux/Windows environments, logs, monitoring, and defect triage.

Relevant to Sii's Embedded QA Automation role: hands-on automation mindset, Python scripting exposure, strong CI/CD and regression-testing background, practical Linux/environment debugging, system-level validation habits, and experience working close to infrastructure and product reliability. Direct L2/L3 switch/router testing, traffic generators, and C/C++ are ramp-up areas, not claimed as primary strengths.

PROFESSIONAL SUMMARY

QA Automation Engineer / SDET with 7+ years of experience building and improving automated validation across APIs, UI workflows, CI/CD pipelines, system environments, and release processes. Strong at turning repetitive manual checks into maintainable automation, improving test signal quality, and debugging failures across application, environment, pipeline, and data layers.

Experienced with Python-supported automation, PowerShell-heavy scripting, REST API testing, Playwright, Selenium, C#, TypeScript/JavaScript, SQL/PostgreSQL, Jenkins, TeamCity, Azure DevOps, Docker/Kubernetes support scenarios, Linux/Windows environments, logs, monitoring, and Git-based workflows.

Best fit for QA automation roles where reliability depends not only on test code, but also on stable environments, repeatable regression execution, CI/CD integration, and clear failure analysis.

CORE STRENGTHS

Python-supported test automation and scripting API, system-level, regression, and workflow validation

CI/CD-integrated automated test execution Jenkins, TeamCity, Azure DevOps, YAML pipelines

Linux/Windows environment troubleshooting Docker/Kubernetes practical support scenarios

Logs, monitoring, defect reproduction, and failure triage

REST API testing, Postman/Newman, SQL/PostgreSQL validation

PowerShell, C#, TypeScript/JavaScript, Java, practical Python exposure

Automation framework improvement and maintainability

Hardware-adjacent environment and VM-based validation experience

Practical engineering mindset: remove manual repetition and improve feedback loops

MAIN STACK

Python PowerShell C# TypeScript / JavaScript REST API testing SQL / PostgreSQL

Jenkins TeamCity Azure DevOps Git Linux / Windows Docker / Kubernetes Playwright

Selenium Postman / Newman

ADDITIONAL TOOLS / TECHNOLOGIES

YAML pipelines Bash Virtual machines Azure Bicep Grafana Prometheus / Loki

Browser DevTools Wireshark Fiddler TestRail Jira C/C++ familiarity as ramp-up area

Networking test automation and traffic generators as ramp-up areas

TECHNICAL SKILLS

Automation & Testing: API automation framework improvement, Regression testing, smoke testing, system-level validation, workflow testing, REST API testing, Postman, Newman, Playwright, Selenium, FlaUI, Power Automate, Test design, defect reproduction, verification of fixes, failure triage, Performance-aware validation through runtime/log-volume optimization

Languages: Python - supporting scripting and automation exposure, PowerShell - strong practical automation and environment scripting language, C# - strong working automation language, TypeScript / JavaScript - practical automation and tooling usage, Java - foundational and earlier professional automation usage, SQL - database testing and investigation, C/C++ - familiarity/ramp-up area, not primary production language

CI/CD & Delivery: Jenkins, TeamCity, Azure DevOps, YAML pipelines, pipeline-integrated test execution, release automation, Git, build/release troubleshooting, repeatable validation workflows, Environment setup, validation, and reproducibility

Infrastructure & Debugging: Linux, Windows, virtual machines, Docker / Kubernetes practical support scenarios, Azure, Bicep, Key Vault, Application Gateway, WAF/firewall, PostgreSQL, logs, monitoring, Grafana, Prometheus/Loki, Browser DevTools, Wireshark, Fiddler

EXPERIENCE

DEFINELY - QA AUTOMATION ENGINEER

Krakow, Poland
06/2025 - 03/2026

Worked in a complex product environment with focus on API automation, test framework improvement, CI signal quality, and pragmatic automation strategy.

Key Contributions

- Improved and extended an existing **API automation framework** for broader team use.
- Increased automated coverage from **117 to 199 tests** without increasing total runtime.
- Reduced log output from around **1.5 GB to 11 MB** per run by removing unnecessary debug logging.
- Improved automation signal quality and made failures easier to analyze, debug, and route.
- Used **PostgreSQL** context in QA/testing work for backend validation and investigation.
- Combined API-driven setup with UI automation to reduce scenario runtime and improve stability.
- Supported transition toward **Playwright + TypeScript** as a maintainable UI automation direction.
- Worked with hybrid automation approaches where no-code orchestration was supported by **PowerShell** and **Python** where needed.

Relevance to Sii Embedded QA Automation Role

- Strong overlap with Python-supported automation, framework improvement, regression execution, CI feedback quality, and defect verification.
- Relevant experience improving automation reliability and keeping test growth from increasing runtime.

LEAPWORK - TESTER / DEVOPS ENGINEER

Krakow, Poland / Minsk, Belarus

11/2018 - 03/2025

Long-term product work spanning QA automation, scripting, internal tooling, environment automation, infrastructure support, release processes, and delivery workflows.

Key Contributions

- Built and maintained **PowerShell scripts**, JavaScript/Tampermonkey automations, helper tools, VM utilities, installation automation, and workflow improvements.
- Automated repetitive manual processes and reduced operational friction across internal workflows.
- Supported automation and release workflows in **Azure DevOps**, YAML pipelines, and environment validation processes.
- Worked with **Azure**, **Bicep**, VMs, monitoring, logs, Key Vault, Application Gateway, WAF, and firewall-related configuration.
- Supported practical **Docker / Kubernetes** scenarios, including logs, services, debugging, and deployment-support tasks.
- Built silent installation flows, remote installation tooling, and browser-side helpers for repetitive work.
- Supported teammates with onboarding, knowledge sharing, setup, and technical troubleshooting.

Relevance to Sii Embedded QA Automation Role

- Strong background in Linux/Windows environments, VM-based validation, CI/CD, logs, troubleshooting, and reliable automation around product/environment behavior.
- Useful fit for hardware-adjacent or system-level QA where failures may involve software, environment, deployment, and configuration layers.

EPAM SYSTEMS - AUTOMATION QA ENGINEER / TESTER (.NET)

Minsk, Belarus

09/2017 - 11/2018

Enterprise automation stage that built coding-based QA foundations across Java/C#, Selenium WebDriver, and regression automation.

Key Contributions

- Worked with **Java**, **C#**, **Selenium WebDriver**, and **NUnit** in enterprise automation contexts.
- Maintained and extended UI regression automation for enterprise web applications.
- Implemented and stabilized automated test cases for core business flows.
- Executed and monitored automated test runs in **Jenkins** and analyzed regression failures.
- Contributed to automation framework and documentation practices for maintainability.
- Had some exposure to mobile automation through Xamarin-related work.

Relevance to Sii Embedded QA Automation Role

- Strong base in maintainable automated test cases, CI execution, defect analysis, and regression coverage.
- Useful coding foundation for adapting to existing Python-based embedded/networking test frameworks.

TARGETED MATCH TO SII REQUIREMENTS

Python-based test automation:

Practical Python exposure through automation support and hybrid test workflows, with strongest scripting depth in PowerShell and broader automation languages.

Regression, stress, and system-level testing:

Strong adjacent experience through regression automation, API/system workflow validation, CI signal quality, log analysis, and environment validation.

Linux environments and CI/CD:

Strong practical fit through Linux/Windows work, Azure DevOps, Jenkins, TeamCity, YAML pipelines, Docker/Kubernetes support, logs, and deployment-support scenarios.

Switch/router testing and networking frameworks:

Ramp-up area. I can bring strong automation, debugging, and system-thinking foundations, but I would not present L2/L3 switch/router validation or traffic-generator tooling as established production ownership.

C/C++, traffic generators, Ansible/Vagrant:

Ramp-up / adjacent areas. Practical automation experience should transfer, but these are not current primary strengths.

EDUCATION

Belarusian State University of Informatics and Radioelectronics (BSUIR)

Bachelor of Science in Digital Economy

Minsk, Belarus

2013 - 2017
