EU Blue Card valid until 12/2027

PROFESSIONAL SUMMARY

QA Automation Engineer / SDET with 7+ years of experience across API/UI automation, CI/CD-integrated quality, scripting, test framework improvement, environment validation, and production-support-adjacent troubleshooting.

Strong practical background in automation engineering with Python-supported scripting, PowerShell, C#, TypeScript/JavaScript, REST API testing, SQL/PostgreSQL, Jenkins, TeamCity, Azure DevOps, Docker/Kubernetes support scenarios, Linux/Windows environments, logs, monitoring, and defect triage.

Best fit for roles where Python automation, CI/CD feedback, environment reliability, supportability, and clear failure analysis matter as much as writing test cases.

CORE STRENGTHS

Python-supported automation and scripting

API, UI, system-level, regression, and workflow validation

CI/CD-integrated automated test execution

Jenkins, TeamCity, Azure DevOps, YAML pipelines

Linux/Windows environment troubleshooting

Docker/Kubernetes practical support scenarios

Logs, monitoring, defect reproduction, and failure triage

REST API testing, Postman/Newman, SQL/PostgreSQL validation

PowerShell, C#, TypeScript/JavaScript, Java, practical Python exposure

Automation framework improvement and maintainability

TECHNICAL SKILLS

Languages & Scripting: Python, PowerShell, C#, TypeScript/JavaScript, Java, SQL, Bash

Automation & Testing: API automation, REST API testing, Playwright, Selenium, Postman/Newman, FlaUI, Power Automate, regression testing, smoke testing, system-level validation

CI/CD & Delivery: Jenkins, TeamCity, Azure DevOps, YAML pipelines, Git, release-support workflows, pipeline-integrated test execution

Cloud / Infrastructure Context: Azure, Azure DevOps, Docker, Kubernetes, Helm, virtual machines, Key Vault, Application Gateway, WAF/firewall context

Observability & Debugging: Grafana, Prometheus/Loki, logs, monitoring, Browser DevTools, Fiddler, Wireshark

Data & Tools: PostgreSQL, SQL validation, TestRail, Jira

PROFESSIONAL EXPERIENCE

DEFINELY - QA AUTOMATION ENGINEER

Krakow, Poland
06/2025 - Present

Worked in a complex product environment with focus on API automation, test framework improvement, CI signal quality, and pragmatic automation strategy.

Key Contributions

- Improved and extended an existing **API automation framework** for broader team use.
- Increased automated coverage from **117 to 199 tests** without increasing total runtime.
- Reduced log output from around **1.5 GB to 11 MB** per run by removing unnecessary debug logging.
- Improved automation signal quality and made failures easier to analyze, debug, and route.
- Used **PostgreSQL** context in QA/testing work for backend validation and investigation.
- Combined API-driven setup with UI automation to reduce scenario runtime and improve stability.
- Supported transition toward **Playwright + TypeScript** as a maintainable UI automation direction.
- Used **Python** as a supporting automation/scripting language in hybrid automation workflows where no-code or UI-level tooling needed extra technical glue.
- Applied Python-oriented automation thinking for test setup support, utility scripting, and reducing repetitive manual validation work alongside PowerShell and TypeScript.

LEAPWORK - TESTER / DEVOPS ENGINEER

Krakow, Poland / Minsk, Belarus
11/2018 - 03/2025

Long-term product work spanning QA automation, scripting, internal tooling, environment automation, infrastructure support, release processes, and delivery workflows.

Key Contributions

- Built and maintained **PowerShell scripts**, JavaScript/Tampermonkey automations, helper tools, VM utilities, installation automation, and workflow improvements.
- Automated repetitive manual processes and reduced operational friction across internal workflows.
- Supported automation and release workflows in **Azure DevOps**, YAML pipelines, and environment validation processes.
- Worked with **Azure**, **Bicep**, VMs, monitoring, logs, Key Vault, Application Gateway, WAF, and firewall-related configuration.
- Supported practical **Docker / Kubernetes** scenarios, including logs, services, debugging, and deployment-support tasks.
- Built silent installation flows, remote installation tooling, and browser-side helpers for repetitive work.
- Supported teammates with onboarding, knowledge sharing, setup, and technical troubleshooting.
- Used **Python** as a practical support language for automation-oriented tasks, data handling, small utilities, and workflow experiments where it was the most convenient tool.
- Built transferable scripting habits across Python, PowerShell, and JavaScript: reading logs/data, transforming inputs, automating repeated steps, and making environment checks reproducible.

EPAM SYSTEMS - AUTOMATION QA ENGINEER / TESTER (.NET)

Minsk, Belarus
09/2017 - 11/2018

Enterprise automation stage that built coding-based QA foundations across Java/C#, Selenium WebDriver, and regression automation.

Key Contributions

- Worked with **Java**, **C#**, **Selenium WebDriver**, and **NUnit** in enterprise automation contexts.
 - Maintained and extended UI regression automation for enterprise web applications.
 - Implemented and stabilized automated test cases for core business flows.
 - Executed and monitored automated test runs in **Jenkins** and analyzed regression failures.
 - Contributed to automation framework and documentation practices for maintainability.
 - Had some exposure to mobile automation through Xamarin-related work.
 - Built the engineering foundation that later transferred into **Python-style automation work**: maintainable test code, reusable helpers, structured assertions, and CI-friendly regression execution.
 - Used scripting/problem-solving patterns that are directly applicable to Python automation: collections, data transformation, string/log processing, and reusable utility design.
-

ROLE-RELEVANT POSITIONING

Python automation: Practical Python exposure through automation support, scripting, hybrid test workflows, and utility-style engineering. Strongest scripting depth is PowerShell, with Python positioned as a practical automation language that can be used effectively in existing frameworks.

CI/CD and production-support context: Strong practical fit through Jenkins, TeamCity, Azure DevOps, pipeline-integrated testing, logs, monitoring, release-support workflows, and environment troubleshooting.

Cloud / DevOps-aligned work: Strong adjacent background in Azure, infrastructure-aware QA, Docker/Kubernetes support scenarios, environment automation, and delivery reliability. AWS/Terraform/Ansible can be ramped up from the same automation and infrastructure foundations.

Incident and failure analysis: Strong experience making failures easier to reproduce, analyze, and route through better logs, cleaner automation output, backend validation, and environment-aware debugging.

EDUCATION

Belarusian State University of Informatics and Radioelectronics (BSUIR)

Bachelor of Science in Digital Economy

Minsk, Belarus

2013 - 2017
