EU Blue Card valid until 12/2027

PROFESSIONAL SUMMARY

QA Automation Engineer / SDET with 7+ years of experience building end-to-end quality systems across API, UI, CI/CD, and environment automation. Strong background in infrastructure-aware testing, workflow validation, and improving delivery confidence through automation, observability, and fast feedback loops.

Experienced in modern automation across Playwright, Selenium, Postman/Newman, C#, TypeScript/JavaScript, and PowerShell, with practical exposure to Python and AI-assisted engineering workflows. Comfortable working across backend APIs, frontend flows, complex product workflows, and CI/CD-integrated quality gates.

Best positioned in roles that combine automation strategy, practical engineering, and system-level quality improvement — especially where testing spans APIs, UIs, workflows, deployment pipelines, and modern AI-assisted development practices.

CORE STRENGTHS

End-to-end QA automation across API, UI, and workflow layers CI/CD-integrated quality and fast feedback loops

Practical test framework improvement and automation strategy

Infrastructure-aware testing and reproducible environments Playwright, Selenium, Postman/Newman

PowerShell, C#, TypeScript/JavaScript Azure, Azure DevOps, YAML pipelines, Bicep

Docker / Kubernetes practical experience Workflow/tooling optimization and internal automation

Strong debugging, observability, and triage mindset

Familiarity with AI-assisted engineering tools and modern agent-based workflows

TECHNICAL SKILLS

Automation & Testing: UI automation: Playwright, Selenium, FlaUI, Power Automate, API testing: Postman, Newman, REST API validation, Test design: regression, workflow validation, system-level quality checks, Test management: TestRail, Basic exposure: BDD / Gherkin / Cucumber, Supporting exposure: Python, automation support scripting

Languages: PowerShell — strong practical automation language, C# — strong working automation language, TypeScript / JavaScript — practical automation and tooling usage, Java — foundational / earlier professional usage, Python — supporting / practical exposure

CI/CD & Delivery: Azure DevOps, TeamCity, Jenkins, YAML pipelines, Release automation, Automation integrated into delivery workflows

Infrastructure & Environment Automation: Azure, Bicep, Virtual machines, Key Vault, Application Gateway, WAF / firewall, Windows / Linux, Bash, Docker / Kubernetes (practical usage), Monitoring / logs / workbooks

Observability & Debugging: Grafana, Prometheus / Loki, Azure monitoring, Browser DevTools, Wireshark, Fiddler

Modern Engineering Tooling: ChatGPT, Copilot, Cloud Code / agent-based workflow experimentation, Practical familiarity with AI-assisted coding and quality workflows

PROFESSIONAL EXPERIENCE

DEFINELY — QA AUTOMATION ENGINEER

Kraków, Poland
06/2025 – Present

Worked in a complex product environment with strong focus on framework improvement, test automation strategy, and quality support across changing automation approaches.

Key Contributions

- Improved and extended an existing **API automation framework** to better support team needs
- Increased automated coverage from **117 to 199 tests** without increasing total runtime
- Reduced log volume from around **1.5 GB to 11 MB** per run by removing unnecessary debug logging
- Improved signal quality and made automation output more actionable for triage and analysis
- Helped shape a **hybrid automation model** where no-code orchestration was supported by PowerShell and Python where needed
- Supported transition toward **Playwright + TypeScript** as a more maintainable and scalable automation direction
- Worked in a setup where automation choices were influenced by business constraints and team enablement needs
- Gained hands-on experience with **modern AI-assisted tooling** and practical workflow experimentation around automation and engineering productivity

Relevance to This Role

- Strong overlap with **workflow validation**
 - Experience across **API + UI + system-level automation**
 - Practical framework evolution rather than only test maintenance
 - Comfortable adapting testing approach to product and business realities
 - Relevant to roles requiring structured automation thinking in complex systems
-

LEAPWORK — TESTER / DEVOPS ENGINEER

Kraków, Poland / Minsk, Belarus
11/2018 – 03/2025

Longest and most formative stage of career. Worked across QA automation, scripting, environment automation, infrastructure support, release processes, and internal tooling within the same product ecosystem.

Key Contributions

- Built and maintained **PowerShell scripts**, JavaScript/Tampermonkey automations, helper tools, VM utilities, installation automation, and workflow improvements
- Automated repetitive manual processes and reduced operational friction across internal workflows

- Designed and supported **environment automation** and infrastructure-related processes
- Worked with **Azure, Bicep, YAML pipelines, Azure DevOps**, VMs, monitoring, logs, Key Vault, Application Gateway, WAF, and firewall-related configuration
- Supported release automation and internal process improvement
- Built silent installation flows, remote installation tooling, and practical browser-side helpers for repetitive work
- Worked with **Docker / Kubernetes** in practical support and maintenance scenarios
- Helped teammates with onboarding, knowledge sharing, setup, and technical troubleshooting
- Acted as a broadly useful technical contributor with strong product and systems context

Relevance to This Role

- Strong fit for **shift-left quality mindset**
 - Strong systems thinking across **automation + delivery + environments**
 - Good fit for **CI/CD-integrated testing**
 - Practical experience with workflow-heavy and infrastructure-aware product environments
 - Helpful background for validating complex, multi-layer systems rather than isolated UI tests only
-

EPAM SYSTEMS — AUTOMATION QA ENGINEER / TESTER (.NET)

Minsk, Belarus

09/2017 – 11/2018

Early enterprise automation stage that built strong coding and testing foundations.

Key Contributions

- Worked with **Java, C#, Selenium WebDriver**, and **NUnit**
- Contributed to regression automation in structured enterprise environments
- Built foundational experience in code-based automation and maintainable test work
- Had some exposure to mobile automation through Xamarin-related work

Relevance to This Role

- Solid coding-based QA foundation
 - Early experience in structured automation engineering
 - Good base for later transition into broader automation and systems-quality work
-

EDUCATION

Belarusian State University of Informatics and Radioelectronics (BSUIR)

Bachelor of Science in Digital Economy

Minsk, Belarus

2013 – 2017
